

HYPERGUARD™

DETECTS BOOSTER BAGS AND STOPS SHOPLIFTERS BEFORE THEY CAN MAKE THEIR MOVE.

Since 1999, over 100,000 Hyperguard devices have been deployed by retail chains worldwide to detect booster bags used by habitual thieves. This proven solution, patented and made by our partners at Alert Systems in Denmark, not only successfully detects foil-lined bags used in shoplifting, but thanks to its advanced algorithms it virtually eliminates false alarms from moving doors or shopping carts.

Hyperguard is available as a standalone pedestal, or it can be integrated into an EAS system, adjusting itself automatically to either AM or RF EAS environment.

MAIN FEATURES

- Highly effective at detecting booster bags at the entrance
- The alarm discourages shoplifters from even attempting theft
- Proven at over 100,000 retail locations worldwide
- Available as a standalone pedestal or as an add-on to an EAS system
- API for easy integration with EAS (RF or AM)
- Proprietary algorithm prevents false alarms from shopping carts and moving doors
